

FP 7000

- Unprecedented power density The FP 7000 delivers a total of 7000 W (2 x 3500 W @ 2 ohms) in only 2U.
- Lab.gruppen sound quality FP 7000 amplifiers maintain the impeccable sonic performance standards set by the original fP Series, with the same durability and even greater efficiency.
- NomadLink® network ready Monitoring and control of key functions accessible via the intuitive DeviceControl software and the robust, daisy-chained NomadLink network, as well as by the leading third party control platforms.
- Patented Class TD amplifier topology Road-proven output stage delivers Class B audio quality with Class D efficiency.
- ► Regulated Switch Mode Power Supply (R.SMPS™) Output power remains constant even with significant drops in the mains voltage.

- Efficient cooling system Unique, lightweight Intercooler® copper cooling system dissipates more heat to allow extended peak output.
- Adjustable parameters Selectable Gain, scalable Voltage Peak Limiter (VPLTM), and bridge-mode operation allow custom configuration for any system or application.
- XLR input and link connectors
- ► Heavy-duty binding post or speakON® output connectors
- Comprehensive protection and warning Excessive output current, DC, high temperature, very high frequency (VHF), short circuit, open load, mains fuse protection, and soft start.

A Benchmark For Touring Amplification

Over the past decade, the tight and transparent sound of Lab.gruppen touring amplifiers has earned the praise of renowned FOH engineers and leading sound rental companies worldwide. FP 7000, one of four models in the FP+ Series, continues this tradition. At the core of the FP 7000's performance is the patented Class TD output stage, a breakthrough amplifier topology that approaches the exceptional efficiency of Class D while retaining the sonic purity of proven Class B designs. Further contributing to the remarkable efficiency of the FP 7000 is a Regulated Switch Mode Power Supply (R.SMPS), which gives the added benefit of stabilizing rail voltages to the output even with wide fluctuations of mains voltage. A highly refined and updated circuit layout optimizes the interaction of R.SMPS and Class TD to produce the extraordinary power density of the FP 7000.

To keep its cool under extreme demands, the FP 7000 relies on Lab.gruppen's proprietary Intercooler. This innovation uses thousands of copper fins to multiply the exposed heatsink surface's rapid heat dissipation. Also, all output devices are mounted transverse to the airflow for uniform cooling. As a result, the FP 7000 delivers Lab.gruppen's trademark "all the power, all the time" with no degradation of sonic performance.

To maximize headroom in any application, the FP 7000 offers adjustable input gain along with Lab.gruppen's exclusive Voltage Peak Limiter (VPL). Adjustable on a per-channel basis, VPL optimizes the output for any load, from a single massive subwoofer to a series of HF compression drivers.

The comprehensive warning and protection features on the FP 7000 safeguard output circuits and connected loads while also extending amplifier life and minimizing the chance of service interruptions. Whether it's a matter of faulty wiring, improper use, or extreme ambient temperatures, the FP 7000 gives clear indication of any problems. Automatic protection measures engage only at critical thresholds. Operating conditions are re-checked every six seconds and, if a fault is detected, normal operation is resumed when measurements return to nominal.

The FP 7000 is shipped with a NomadLink network interface as standard. In conjunction with DeviceControl software, or the leading third party control platforms, NomadLink network allows monitoring of all key amplifier parameters and remote control of power on/off, channel mutes, and channel solo functions. (NomadLink requires the separate NLB 60E NomadLink Bridge & Network Controller).

Specifications FP 7000

Weight

Finish Black painted steel chassis with black painted steel / aluminum front

Approvals CE, ANSI/UL 60065 (ETL), CSA C22.2 NO. 60065, FCC

- Note 1): Regarding n.r. (not recommended) notes: The amplifier will be fully operational in bridge-mode into 2 ohm and high impedance (Hi-Z) loads, but due to physical constraints in the construction, the max. output power will not be significantly higher than running individual channels and therefore this mode of operation is not recommended.
- Note 2): Automatic -6 dB gain compensation when bridging channels.
- Note 3): Separate 230 V or 115 V versions available. Not selectable on the amplifier.
- Note 4): PAL can reduce the maximum output power to keep the power supply operating safely, and/or to prevent excessive current draw tripping the mains breaker. Refer to the FP+ Operation Manual section 7.5.8 Power Average Limiter (PAL) for more information.
